#### **ABSTRACT**

In response to problems experienced by students from two-year college feeder schools, Brigham Young University (BYU) designed a computer file and transfer matrix screen to automate and standardize the transfer evaluation process. The file contains transcript information on courses for each college providing transfer students, including such information as the course name, department, catalog number, credit hours, and upper/lower division status; equivalent BYU course identification; if credit is accepted by BYU; and if entry has been validated. This process ensures uniform advising efforts as counselors and transfer students receive a computerized matrix showing how their previous coursework has been evaluated by BYU and a document showing the application of transfer course work to BYU degree requirements. This process has also proved useful in recruiting and information visits to feeder schools. In a test of the system's capabilities, data tapes of student transcripts were obtained from a feeder school and input into the system. At the recruitment visit, student records were called up and evaluated against BYU degree requirements, showing the best courses to take at the feeder school and suggesting the optimal time to transfer. These changes have made a major improvement in relations with transfer students and administrators by making BYU a partner rather than an adversary. Sample transfer matrices, student progress report, and transfer student profile are attached. (KP)

The Value of Tracking Students--Gathering Evidence About Their Progress Along the Way

There are few things that can be as discouraging for students and school administrators alike as the process of transferring from one institution to another. With the encouragement of students and particularly administrators at some of our prime feeder schools, Brigham Young University has developed a program that has helped us address some of the problems that we have experienced in the past and has given encouraging promise of even better experiences for the future.

Maybe some of you have been in a situation similar to the one that we faced from time to time. We had two students from the same school, one of our feeder: hools, visit our campus. They planned to be in the same major, and had taken the same courses at the junior college. While on our campus they each met with a different faculty adviser. On their way home, they compared notes, and began to see the differences in the information that they had been given, and that is where our problems began.

After working through that situation, we knew that we needed to do something different in order to bring continuity and stability to our transfer program. We decided to see if we could automate the transfer evaluation process and tie it into the rest of our computer system. We designed a computer file and a transfer matrix screen (Figure 1) that contained all the transcript information on courses for each college from whom we received transfer students.

The file contains:

- 1. The name of the transfer college
- 2. An expired year term for the course
- 3. The department name
- 4. The catalog number
- 5. The credit hours
- 6. Whether the credit hours were fixed or variable
- 7. The transcript course description
- 8. The BYU course id for equivalent courses
- 9. If the course is upper or lower division work
- 10. If the course is a general education course
- 11. If credit is accepted by us
- 12. If we have validated the entry

With this information we were able to assure ourselves, and transfer students, that the same course from the same institution would be evaluated the same way every time. We had already developed a computerized degree audit system and so it was easy to integrate this transfer transcript information into that system.

We now had two documents that we felt would be very

beneficial in the process of assisting students wanting to transfer to BYU. First there was the computerized matrix showing all the courses we evaluated and how those courses would be treated on our campus. We were able to put this document in the hands of administrators at the transfer school so they could evaluate it and ask for clarification, additions, deletions etc. As a consequence this document was instrumental in stimulating discussion between departments at BYU and interested transfer institutions and facilitating discussion on curriculum matters. This document was also available to the advisement and/or counseling center where transfer students would have access to the information provided (Figure 2).

Second, we had a document that we could put in the hands of transfer students, at the time they were accepted, showing how their transfer course work was being used to complete degree requirements at BYU. It also showed what work was remaining for the student to receive a degree from BYU. This was and is an official university document on which the students could rely. It's primary use was not only to lock in place the remainder of a student's program but also to be of assistance in the registration process (Figure 3A and 3B).

Once these documents were in place it became apparent to us that we could use this process at the transfer school in our recruiting and information visits. We contacted one of our feeder school and explained what we wanted to do. They volunteered to send us a computer tape of their students with all the course work they had completed and the majors their students were currently pursuing.

With this information we translated their majors into our system and then produced a BYU degree audit form for each student. For our next recruitment visit we were armed with degree audit documents for every student and were able to put the document in the hands of interested students showing them how their course work had been evaluated and what BYU degree requirements their work-to-date would meet. By using the matrix document we had produced, we were also able to instruct them on their next registration at the transfer school. We could point out courses that could be taken there that would move them along in completing BYU degree requirements.

Using this transfer matrix document we were also able to talk to students about when they ought to consider transferring to BYU. We could show them all the courses they could complete at the transfer school that would fill requirements just as though they were registered on our campus.

Needless to say, these changes have made major improvements in our relationships with transfer students, their parents, and transfer school administrators as well. We

are now seen as a partner with the the transfer process rather than an adversary in the process.

During this past year we have started to receive transcripts electronically. Therefore there is no hand intervention in entering the courses or evaluating the equivalencies (Figure 4). We have also been able to set up a remote access system with some transfer schools and when our recruiters visit these institutions, we can call up a student's record in the computer and evaluate it against BYU degree requirements. Not only has this saved a tree or two by reducing the amount of paper used in the process, it has also given us the ability for transfer student to interact with us year round.

As with most things, each time we arrive at one horizon, we see a number of directions we can move to improve service. This has not solved all of our problems however. We are still a limited enrollment institution and therefore we must be careful as these services are provided. We don't want to give the impression to every student that they will be accepted regardless of their previous performance.

One thing that has come out of this work is that this system does demonstrate to some students that we are not the ideal institution for them to consider. We actually count this as a positive for both the student and for BYU. Nothing can be as detrimental to a institution's image as a current student who finds out they really should not be enrolled there. By being as open as possible and showing students what will happen with their previous course work we actually provide incentive for some to go elsewhere which really is in their best interest, and saves BYU negative publicity.
